

# IMPORTANT INFORMATION ABOUT YOUR DRINKING WATER

## Weymouth Township Board of Education Has Levels of Perfluorooctanesulfonic Acid (PFOS) Above A Drinking Water Standard

Our water system violated a New Jersey drinking water standard and as resident, we're letting you know what has happened, what you should do, and what the Weymouth Township Board of Education is doing to correct this situation.

Weymouth Township BOE routinely monitors for the presence of federal and state regulated drinking water contaminants. New Jersey adopted a standard, or MCL, for PFOS in 2020 and monitoring began in 2021. The MCL for PFOS is 0.013 parts per billion (ppb) and is based on a running annual average (RAA), in which the four most recent quarters of monitoring data are averaged. On 2/27/2023, we received notice that the sample collected on 2/13/2023 showed that our system exceeds the PFOS MCL TP001001 (our well). The RAA for PFOS based on samples collected over the last year is 14.45 ppb.

### What is PFOS?

Perfluorooctanesulfonic acid (PFOS) is a member of the group of chemicals called per- and polyfluoroalkyl substances (PFAS), that are man-made and used in industrial and commercial applications. PFOS is used in metal plating and finishing as well as in various

commercial products. PFOS has also been used in aqueous film-forming foams for firefighting and training, and it is found in consumer products such as stain-resistant coatings for upholstery and carpets, water-resistant outdoor clothing, and greaseproof food packaging. Major sources of PFOS in drinking water include discharge from industrial facilities where it was made or used, and the release of aqueous film-forming foam. Although the use of PFOS has decreased substantially, contamination is expected to continue indefinitely because it is extremely persistent in the environment and is soluble and mobile in water.

### What does this mean?

*\*People who drink water containing PFOS in excess of the MCL over time could experience problems with their immune system, kidney, liver, or endocrine system. For females, drinking water containing PFOS in excess of the MCL over time may cause developmental effects and problems with the immune system, liver, or endocrine system in a fetus and/or an infant. Some of these developmental effects may persist through childhood.*

*\* For specific health information see*

[https://www.nj.gov/health/ceohs/documents/pfas\\_drinking%20water.pdf](https://www.nj.gov/health/ceohs/documents/pfas_drinking%20water.pdf).

## What should I do?

- Anyone concerned about their health should consult with their personal healthcare provider.
- The New Jersey Department of Health advises that infant formula and other beverages for infants, such as plain water or juice, should be prepared with bottled water when PFOS is elevated in drinking water.
- Pregnant, nursing, and women considering having children may choose to use bottled water or a home water filter designed to remove PFOS for drinking and cooking to reduce exposure to PFOS.
- Other people may also choose to use bottled water for drinking and cooking to reduce exposure to PFOS or a home water filter that is certified to reduce levels of PFOS.
- Home water treatment devices are available that can reduce levels of PFOS. If a water treatment device is used, it is important to follow the manufacturer's guidelines for maintenance and operation. For more specific information regarding the effectiveness of home water filters for reducing PFOS, visit the National Sanitation Foundation (NSF) International website, <http://www.nsf.org/>. [NSF does not certify reduction of PFOS to the NJ MCL for PFOS.]
- Boiling your water will not remove PFOS.

For more information, see <https://www.nj.gov/dep/watersupply/pfas/>.

## What is being done?

We are continuing to conduct quarterly monitoring of the water, while we explore treatment technologies to remedy the problem. We encourage the use of our state-of-the-art filtered water bottle fill stations. Staff and students will also be offered bottled water at their request throughout the school day. We anticipate resolving this issue within 1 year.

For more information, please contact Superintendent Al Lewis at (609) 476-2412 or 1202 11th Avenue, Weymouth Twp, NJ 08317 or [alewis@weymouthtsd.org](mailto:alewis@weymouthtsd.org)
